

Ember

Keep the important parts of your life warm. **A few minutes a day** keeps a fire going, so the big work never starts from cold.

How the fire works

Every area of your life is a fire. It cools on its own, and small actions heat it back up. The design makes one thing obvious at a glance: what's burning, and what needs feeding now.

Three places an area can live

Main

One focus at a time. Cools every 2–3 hours during your active hours, so it asks for several 5–10 minute sparks a day. By evening you're warmed up for a big session.

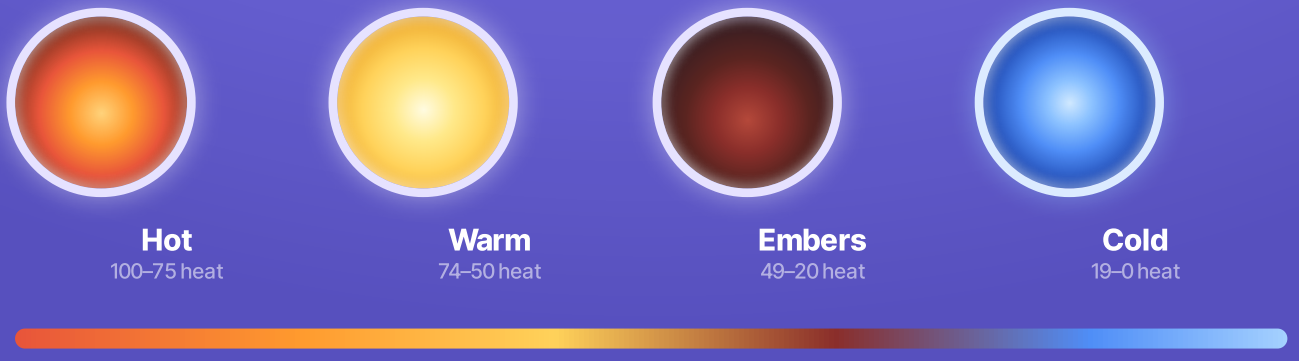

On the side

Kept alive, not pushed. Each has its own cooling speed: daily, every few days, or weekly. One small action a cycle keeps them warm.

Archive

Paused on purpose and frozen. Archived areas don't cool or nag. History is kept, and they can move back any time.

Four heat levels

Cooling

Heat drops one level per cooling period. The main fire's clock only runs inside your active hours (default 8:00–23:00), so it never dies overnight. Side areas count whole days.

Heating

A spark (5–10 minutes) lifts a fire one level. A big session takes it straight to hot and is marked in history, so sparks leading into evening sessions become visible.

Colour

A bright periwinkle sky that feels friendly, with glass on top. Warm colours belong to fire, and **sun yellow** marks the numbers and wins worth celebrating.

Sky, the background world

Sky 300	400	500	600	700	800	900
#8F88EC	#6C64DE	#5B53D3	#4D45C6	#3F38B4	#2F2A8F	#241F6E

Screens use a soft radial from Sky 400 behind the main fire to Sky 700 at the bottom. Sky 800 is the tab bar and segmented controls; Sky 900 is the darkest sunken surface. Sky 300 fills small icon buttons.

Heat, used only for fire

Flame	Blaze	Glow	Ember	Ice	Frost
#E8553A	#FF9A2E	#FFD25A	#8A2E2A	#4F8EF7	#A9D4FF
Hot edge	Hot fire	Warm fire	Needs feeding	Cold fire	Cold centre

Accents and surfaces

Sun	Navy	Glass	Sunken
#FFD84D	#1C1850	white 13%	navy 42%
Highlights	Ink on white	Raised cards	Lists, history

Accent cards

Sunrise	Sky blue	Bonfire
Needs you now	Tips, info	Streak moments

Ambient mode (optional)

Main hot	Main warm (default)	Main embers	Main cold

If turned on, the sky shifts with the main fire: brighter when hot, deeper as it cools, icy blue when cold. Off by default.

Type

Inter Tight, set heavy and tight for headlines and numbers, the way a scoreboard talks. Body text stays regular weight so the big moments stand out. Numbers use tabular figures.

Display, 56 / 800 -4.5%	**Keep it burning**
Hero number, 48 / 800 -4%	**2.5 h**
Title, 28 / 750 -3%	**JavaScript is hot**
Heading, 20 / 700 -2%	**On the side**
Body, 15 / 450	Open the editor and write one line. That counts.
Label, 13 / 700	**Cools in 1 h 40 min**
Caption, 11 / 500	Fed today at 14:20

Highlight rule: one phrase or number per screen can turn sun yellow, and only when it's the thing you earned or need to act on.

Layout

Spacing

4 · 8 · 12 · 16 · 24 · 32 · 48. Screen edge 16, card padding 20, gap between cards 12.

Radius

12 for icon buttons, 24 for cards and sheets, full pill for buttons, chips and tabs. Fires are perfect circles.

Light and depth

Fires get a glowing white rim. Cards are either raised glass or sunken navy, never drop shadows.

Components

The parts every screen is built from. Heat always reads the same way, so a small card and the main fire feel like the same thing at different sizes.

Main fire

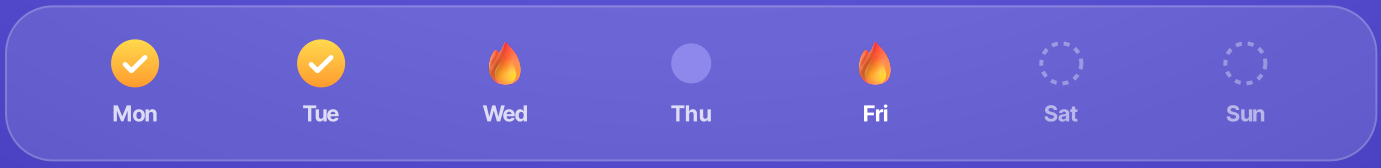

Glowing white rim, solid heat core, and the spark button sitting on its lower edge. Text inside turns navy on Warm so it stays readable on yellow.

Top bar

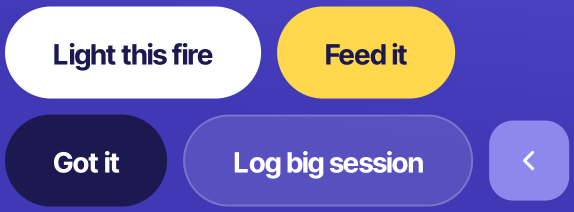

Avatar, streak pill with arrow into the streak screen, and a quiet count of today's sparks on the right.

Week row

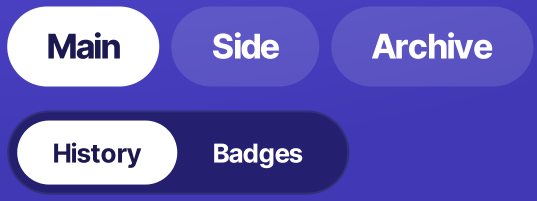

Sun check: kept alive. Flame: big session day. Lavender dot: missed. Dashed ring: still to come. Today's label is white.

Buttons

White is the main action on sky. Navy is the main action on white sheets. Sun is for the one area that needs you most. Labels say what happens.

Tabs and segments

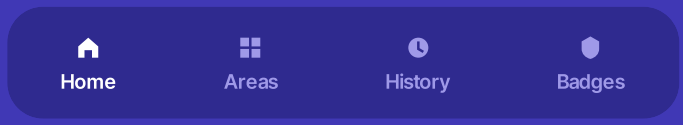

Big pill tabs switch between groups of areas. The navy segmented control floats at the bottom of detail screens.

Spark button

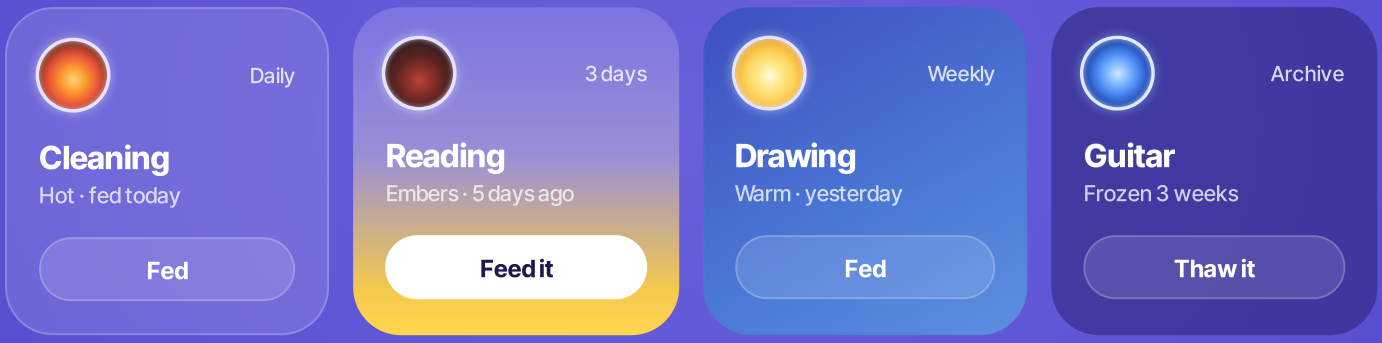

White circle with a fire-gradient flame. Tap for a quick spark, hold to start a timed one.

Tab bar

More components

Area cards

Glass by default. The area that most needs you gets the Sunrise card with a white button, like a gentle alarm. Archived areas sit sunken and frozen.

Cooling speed stepper

Streak card

History rows

Badges

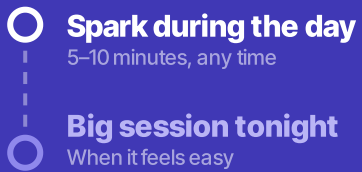

Earned badges glow with fire and a sun ring. Locked ones are embossed in the sky colour.

Celebration sheet

White sheet over a dimmed screen: flame on a pale sunburst, a sun-yellow title, one line of encouragement, a navy button. Used when a fire goes from cold or embers back to hot.

Timeline

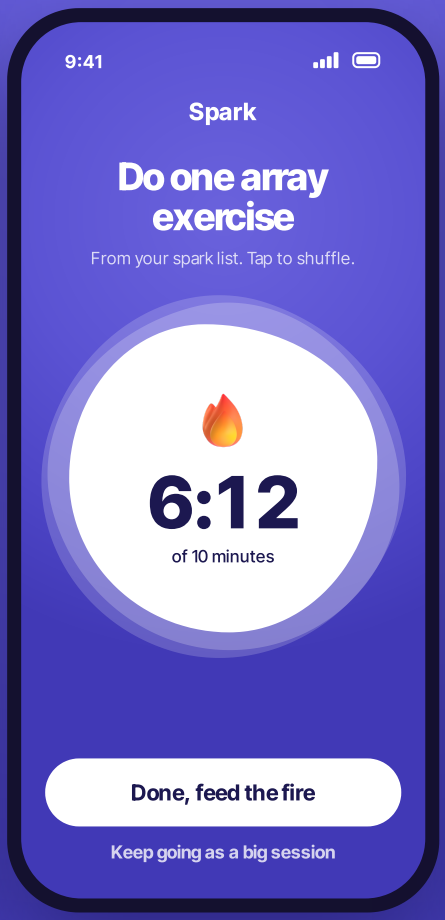

Key screens

Phone-first and opened from the home screen like an app. Everything you do most often is one tap away.

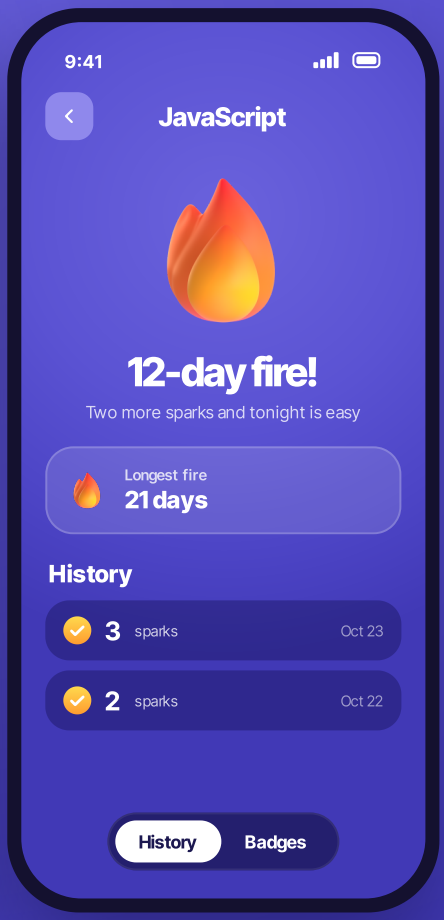

Home

Main fire with spark button, the week, and side areas. The one that needs you gets the Sunrise card.

Spark timer

A small task with an end, on a soft white shape. Finishing early still counts.

Area detail

The fire, its streak, and a history of sparks and big sessions.

One glance

The main fire fills the top half of home. Its colour, label and countdown answer “do I need to do something now?” before you read anything else.

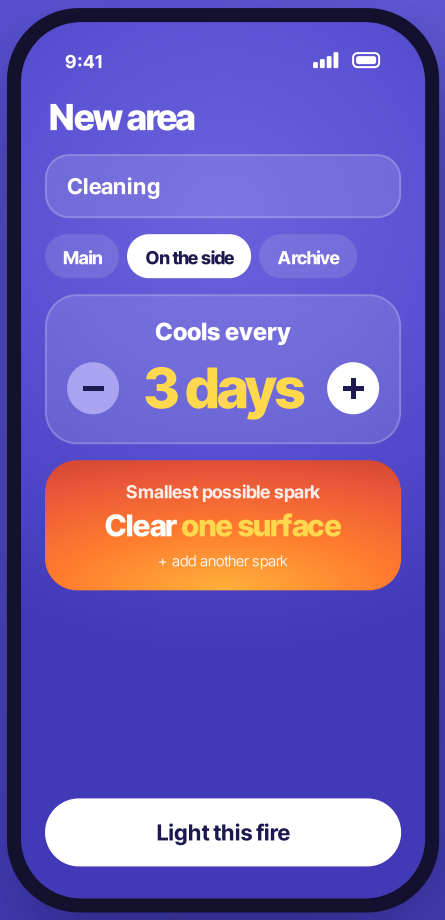

One tap

The spark button logs a spark instantly. Holding it opens the timer with a suggestion from that area’s spark list.

One priority

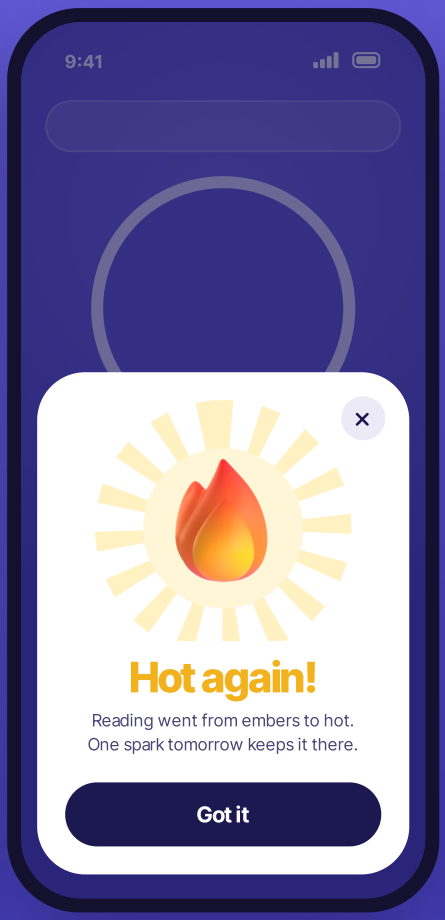

Only one side area at a time gets the Sunrise card: the coldest one that isn’t archived. Everything else stays calm glass.

More screens

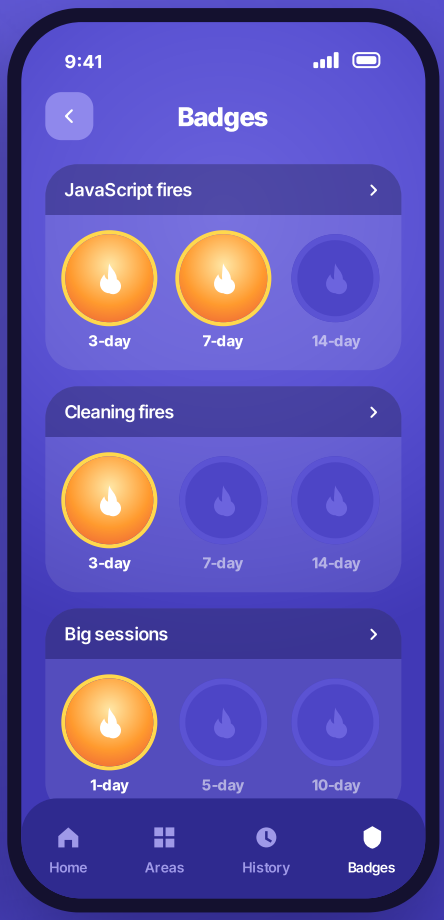

New area

Name, place, cooling speed on the stepper, and the smallest possible spark.

Back to hot

A celebration sheet when a cooling fire is brought back to hot.

Badges

Fire badges per area. Earned ones glow, locked ones are embossed.

Feedback

Feeding a fire plays one short flare: the rim brightens, the core swells, then settles at the new level.

Reminders

"JavaScript is down to embers." Sent only when a fire drops a level, and only inside active hours.

Empty states

No areas yet: "Name the first thing you want to keep warm." A cold fire shows its smallest spark, never a guilt message.

Tokens for the build

Everything above as CSS variables, ready for the app. Names describe roles, so colours can change later without renaming.

```

Open decisions

Whether ambient mode is on by default, the exact active hours, and whether more than one area can be main at once.

Style note

The bright sky, glass cards and glowing ring follow the feel of fitness reward apps. The 3D fire is Microsoft's Fluent Emoji (MIT licence, free for commercial use). No Sweatcoin logos, artwork or marks are used.
